

16-July-2016

I always wanted a decent battery box for portable operation. Thanks to a how-to from kj6vu (<http://www.kj6vu.com/?p=958>), I found that a \$29 USD Rigid box from Home Depot did indeed work very well.

I did not include all of the features from the kj6vu design, but am pleased with the result for my needs. The meter & USB outlets are switched since they would draw power 24x7.

Power outlets that I included are a double Anderson Powerpole, a 12v lighter style accessory outlet, and a double USB power socket. All those, plus a digital meter came from Powerwerx (<https://powerwerx.com/>).

You can find additional component info on the kj6vu page or Google your own!
